

Quercus palustris

Pin Oak

Unlike many oaks, pin oak has no major taproot and is easily transplanted, and relatively fast-growing. Requires acid soil and adequate moisture. Tolerant of swampiness and wet clay. Fall foliage is various reds and russets. Acorns are an important wildlife food.

Suggested companions: swamp white oak (*Quercus bicolor*), bur oak (*Quercus macrocarpa*), red ash (*Fraxinus pennsylvanica*).

Plant Type: Tree

Size: 50-75' H
50-75' W

Water Tolerant: Somewhat

Habitat:

Forested Upland
Forested Wetland
Woodland Margin

Soil: Average Garden Soil
Rich Moist
Sandy/ Gravelly
Very Damp/Wet
Clay

Exposure: sun

Flower Color:

Yellow
Green

Bloom Time:

May

Plant in: Spring

Groundcover: No

Other Attributes:

Wildlife attracting
Fall color
Butterfly attracting
Bird attracting
